Fundamentals of Statistical Inference
CVR 7310

Course Description

This course is the second course in the Biostatistics sequence and is
intended for consumers of statistics in the biological and medical
fields as well as researchers. It will concentrate on more advanced
methods of statistical analysis that are typical biological and medical
applications of statistics. It is assumed that the student will be
familiar with basic statistics and statistical techniques as presented
in CVR 7300. We will be using the statistical program JMP to perform
statistical processing. It is assumed that the student has basic skills
in the use of JMP.
