About Netter Illustrations:

Dr. Frank Netter was a surgeon and medical illustrator. The Atlas of Human Anatomy contains some of his finest anatomical paintings and is the atlas of choice among health professions students the world over. His illustrations are appreciated not only for his inspired depiction of the human body, but also their anatomical accuracy. This atlas is organized using a regional approach to correspond to the way most anatomy courses are taught. However, by necessity physiology courses are taught using a systems approach. We will use selected Netter illustrations to help you visualize anatomy.

Any edition of the Netter Atlas contains the classic hand painted illustrations.

The latest edition includes online access, website links and 3D interactive sites.

Recommended:

To practice drawing anatomy, get dry erase board from the NSU Bookstore.

You should bring your favorite anatomy atlas to each lab session.

Bring colored markers, a highlighter and your Anatomy Companion handout to every session.
