UpToDate has over 4500 clear, concise topic reviews (the equivalent of over 40,000 pages of text), all of which is original material written and edited by physicians. You can click on an author’s name for professional title and affiliation.

To start, enter a search term in the box.

The links to MEDLINE abstracts in this database ensure that the material is relevant and current. Clicking on most of the reference numbers, either in the text or in a citation, automatically brings up the corresponding MEDLINE abstract.

10 titles matching: Hearing loss, Conductive

Pediatric Medicine (4 titles)

Most Relevant Topics
- Etiology of hearing impairment in children
- Evaluation of hearing impairment in children

A search for the topic “Hearing Loss” gives us several results, including these. Use the options above the results list to narrow the search results or to list adult topics first.
The topic review gives you several different options:

- Access MEDLINE abstracts by clicking on the reference number.
- Click on the hyperlinks to view figures or graphics. UpToDate gives you the option of exporting images to graphics-editing programs such as Power Point. You can also print the graphics.
- Each drug mentioned in UpToDate is linked to a comprehensive drug information database covering over 1600 drugs, providing instant access to usual dosages, common interactions, warnings and precautions, etc.
- Most reviews have numerous links to related topics, even those related to other specialties.
- The introductory paragraph at the beginning of each review tells you the date of the last major update and the date on which the topic will be updated again.
- The “What’s New” feature makes it easy to keep current. Simply type “What’s New” in the search field box to read summaries of the latest and most important recent medical news for all of the medical specialties covered in UpToDate.
